

project360 Maturity Assessment[®]

A Project Controls Solutions and Management Solutions product

Our proprietary **project360** measures project personnel's project controls knowledge and experience across 25 technical, contextual, and behavioral project personnel competencies. This enables us to create a customized project training programs and human capital dashboards to equip our clients with 360-degree visibility into their existing competencies and skills gaps.

Assessing Project Controls Maturity

We developed the **project360** to provide employees, their managers, and Project Controls Solutions with a shared understanding of an individual's current level of project controls maturity

25 Competencies

The **project360** assesses an individuals' knowledge and experience across 25 technical, behavioral, and contextual competencies that are essential to delivering effective projects.

Technical

Understanding of project controls concepts used in the planning, controlling, and monitoring of data in support of projects and programs

Behavioral

Awareness of relevant behaviors including collaboration, adaptability, communication, self-development, and the achievement of desired results

Contextual

Experience of the full life cycle of a project and understanding of how to navigate leadership, teamwork, building and maintaining relationships, as well as cultural and social awareness within the organization

The **project360** verifies and quantifies individuals' project competencies, equipping organizations to make data-driven staffing decisions, and enabling us to deliver individualized training recommendations.

A data-driven approach to project controls training, development, and recruiting
