

Client Impact Stories

Groundwater Sampling and Site Monitoring for a Department of Defense Client

The Challenge

A Department of Defense client tasked Management Solutions LLC to perform environmental groundwater sampling and monitoring as well as perform supplemental services to advance the site toward closure. Work includes annual sampling of 45 wells between the three sites, completion of monitoring well maintenance, preparation of an optimization study work plan, optimization study fieldwork, monitoring well abandonment, and project meetings.

The Strategy

MSLLC assesses client needs and develops a plan for groundwater monitoring, reporting and MNA optimization injection field work. These include a Quality Control Plan (QCP), Project Management Plan (PMP), amendment of the Uniform Federal Policy Quality Assurance Project Plan (UFP-QAPP) and Accident Prevention Plan/Site Safety and Health Plan (APP/SSHP), the groundwater monitoring annual report, an MNA optimization study work plan, and a technical memorandum for well closure.
